

Langley Research Center Safety Alert

SA-09-91

Date: May 14, 1991

TO: Facility Safety Heads

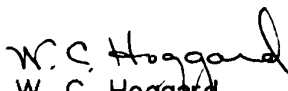

FROM: 429/Chief, SSQRD

SUBJECT: Hazardous Waste Management, Satellite Accumulation Areas (SAA)

On August 31, 1991, Safety Alert SA-12-90 was distributed detailing the implementation of EPA regulations at LaRC for hazardous waste control. It addressed the requirement for each facility that generates hazardous waste to designate a specific location for the accumulation of that material, defined as a Satellite Accumulation Area (SAA). That alert also required Facility Safety Heads to notify SSQRD of the specific location of the SAA. Less than half of LaRC facilities have responded to this requirement.

All Facility Safety Heads must notify the Environmental Engineering Section (EES), MS-429, of the location of the designated SAA for their assigned area by May 30, 1991. If your assigned facility does not generate hazardous waste, a negative response is required. If you require assistance, contact Ms. C. J. Stafford at extension 43207.

It shall be noted that violation of EPA requirements can result in severe penalties against the Center and legal action against individuals. Your cooperation is appreciated.
